

Create Final Reflection

Aiden Morrison

SECTION J

1. How were you able to use code to answer your project question?

I was able to use code to answer my project question by processing data efficiently, visualizing the data, and then producing a statistical analysis of that data.

2. What errors did you encounter during the development process and how did you fix them?

I struggled to find the most efficient way to analyze the question I wanted to answer, and did some research to find how to effectively use the pandas library.

3. How have your Python skills developed since the start of the class?

I had some prior knowledge of python going into class, but I have certainly refined my skills and gotten better at the more tedious aspects of programming in python.

4. What coding skills have you learned that you believe can be incorporated into your future work/life and how?

I believe the coding skills I've learned here can apply in my future career in the Air Force and as an Electrical Engineer with abilities to analyze data and apply sensory to python programming. The critical thinking I've learned in this class alongside python will also assist me in my future career by allowing me to make more knowledgably and quick decisions.
