

I believe there should be no bias in algorithms used in the criminal justice system. This belief stems from the fact that historically there has been racial prejudice in the criminal justice system, and that prejudice has seeped into algorithms currently in use. I have seen a few studies showing that algorithms investigating cases of theft inherently target people of color more than those who aren't people of color. This bias is simply not ok. As such, I believe there should be no bias used in algorithms in the criminal justice system, and believe that many of the biased beliefs we see today stem from a history of racial prejudice.
