

There is a lot that experts in a variety of fields can contribute. Geologists can give insight into the geological conditions of the drilling site which may improve the accuracy of the directional survey data. Lawyers and legal experts can make sure the drilling is compliant with environmental and legal standards at the federal and state levels. Environmental engineers can give guidance and wisdom on how to manage the waste and pollution that may result from this drilling. Overall, there is a lot that other experts in other areas can contribute to this problem.
